

The Best Treatment For IBS - Possible Causes Of IBS

Irritable Bowel Syndrome, whilst not life threatening, can be debilitating. People can suffer different symptoms and experience different degrees of discomfort. There is no one-off miracle remedy; nevertheless the majority of people respond well to treatments, be it way of life changes, improvements in diet or medication. The key is to understand your IBS, and to work out what is the best treatment(s) for you.

- One of the main reasons for IBS, like a lot of problems relating to the body is self-induced.
- By this I mean you are the cause of the results of what food you eat.
- Many individuals sadly, fast eat their meals and do not get proper digestion of their food.
- Likewise people tend to eat far too much junk food, take away food, crisps and quick sweet snacks.

Antibiotics Such as Metronidazole and Vancomycin

There are others - are effective at **treating IBS** symptoms of **constipation** or **diarrhea**. This suggests that an over-production of bacteria in the intestines may be the root cause of IBS.

Ovarian Cysts

Fluid-filled sacs formed in the ovary are called ovarian cysts, which may be formed at the time of ovulation. Besides irregular menstruation, pain during bowel movements and pelvic pain, bloating is also a sign of presence of ovarian cysts. The gynecologist will determine the size and severity of the ovarian cyst and will advise the required treatment. The person will get relief once the cyst has been dealt with.

- For many, their **IBS symptoms** are aggravated by stress or emotional conflict.
- Research into this area has to yield any clear correlation, and stress is not considered a cause of IBS.
- However, stress management can form an important part of **IBS treatment**.

There are No Specific Reasons for IBS

According to medical studies, it was revealed that a majority of the patients with this bowel disorder have a sensitive or an overactive intestinal tract. The diagnosis of IBS is done based on the physical examination and medical history of the patient. In order to rule out other medical conditions, the physician may consider performing blood tests and stool test. The symptoms of IBS can be controlled effectively by managing stress, diet, and way of life changes.
